

# EnviroTech Consulting Services

*Dedicated to Protecting our Client's Assets!*

**EnviroScan** from **Enviro Tech Consulting Services** will lead to a number of conclusions regarding your roofing investment:

# EnviroScan

- **GOOD CONDITION:** The roof is a prime candidate for a cost effective, life extending, maintenance program.

- **MINOR PROBLEMS:** if corrected quickly, can be done at minimal cost, avoiding major expenditures.

- **DETRIMENTAL CONDITIONS:**  
A serious condition, but prompt, well thought out action can still save the majority of your investment.

- **ROOF REPLACEMENT:** is necessary when all other options are exhausted. Requires plans and specifications that will solve existing problems, and meet realistic budgeting requirements.

**Enviro Tech's** state-of-the-art roof evaluation is only pennies per square foot; a modest expenditure compared to the costs of major roof repairs and/or replacement.

**EnviroScan** provides the information you need to make sound, logical roofing decisions.

**EnviroScan** offers:

- COMPLETE REPORT
- DIGITAL PHOTOGRAPH DOCUMENTATION
- INFRA-RED SCAN OF ROOF AREA
- WET AREAS MARKED ON ROOF SURFACE
- SCALE DRAWINGS OF WET AREAS
- RECOMMENDATIONS & BUDGETS

# EnviroScan: A Wise Roofing Investment

Thermal image showing the hot spots under the existing roofing in the photograph to the right. The saturated insulation under the roofing plies holds heat. The infrared photograph shows the hot areas, or wet areas.

The areas are marked on the roof top allowing identification of the infrared findings. These areas will be removed during a restoration of the existing roofing application.

Good decisions are usually based on thorough information. **EnviroScan** gives you the most comprehensive information package on your roofs available today. But information is not enough! Information tells you that a problem exists. **Why** it exists and **How** you avoid that problem in the future are more important. The **Why** and **How** of roofing are matters of experience. Enviro Tech consultants use their extensive experience to transform information into effective roofing projects and programs.

**EnviroScan** includes examination of parapet walls, copings, flashings, drainage details - giving you the information you need. New roofs that leak because no one dampproofed the parapet walls are failures nonetheless. Yet these details are usually ignored by "roofing contractors". The **EnviroScan** survey will address each important detail associated with your roof and your roofing program.

## **EnviroScan** allows you to:

- Know the True Condition of Your Roof.
- Plan Immediate Work Based on Fact.
- Project Budgets Based Upon Fact and Experience.
- Plan Long Range Programs With Clearly Defined Goals.
- Execute Work Using Clear, Professional Specifications.
- Deliver Projects at Budget, On Time, As Specified.
